

SEMINARIUM UKŁADY DYNAMICZNE

Tytuł: **Lagarias Wang finiteness conjecture**
Referent: **Damla Buldag**
Data: **9 III 2018**

The Lagarias Wang finiteness conjecture was introduced in 1995 in connection with problems related to spectral radius computation of finite sets of matrices. The conjecture has been proved to be false recently and there are alternative proofs of it. One of the proofs on specific matrices will be presented.
